

<b>Printronic Technical Bulletin</b>	Number PrintNet-0001	Revision A
	Product Type PrintNet	Date 10/98
<b>Subject</b> Installing PrintNet Kits in P5000 Series Printers	Originator T Brinkmeyer	Page 1 of 1

**Subject:**

Installing Printnet kits in P5000 model printers, P5/8/12, P5A/9/14 and the P5B/10/15 models and differences between kits.

**Information:**

When you are asked to install a Printnet kit there are several possible combinations of Printnet kits and P5000 series printers, P5/8/12 models, P5A/9/14 models and the P5B/10/15 models. This technical bulletin describes things to be aware of when installing Printnet kits in these different printer models. **Keep in mind the different interfaces allowed between the P5/8/12 and P5A/9/14 model printers and the P5B/10/15 model printers. The P5/8/12 and P5A/9/14 models allow either the C/T option or the Printnet option, not both. The P5B/10/15 models allow both the C/T option and the Printnet option at the same time.** The difference between the kits designed for the P5/8/12 and P5A/9/14 model printers and those designed for the P5B/10/15 model printers is the mounting bracket.

**Note:** With Printnet kits shipping around 11/1/98 this problem goes away because the kits will include necessary hardware (brackets) to install the kit in either printer model.

**Printnet kits part numbers:**

164462-001	10Base-2
164461-001	10Base-T

These kits are designed for the P5000 series printers, models P5B/10/15, and have an attachment bracket designed for this model printer. When installing them in P5B/10/15 model printers the installation is as described in the kits.

You **cannot** install these kits in P5/8/12 and P5A/9/14 models.

**Printnet kits part number:**

163223-001	10Base-2
163221-001	10Base-T

These kits are designed for the P5000 series printers, models P5/8/12 and P5A/9/14, prior to the release of the P5B/10/15 model printers. These have a bracket designed for the P5/8/12 and P5A/9/14 models which allow only 1 option installed at a time. When installing them in P5/8/12 and P5A/9/14 model printers the installation is as described in the kits.

These kits can also be installed in the P5B/10/15 model by installing the Printnet where the CT presently goes. You will however be limited to only the Printnet or C/T connection, not both.
